Contents

1. Abbreviations	23
I. User Requirements Specification (URS)	24
2. Introduction	4
2.1. Background	4
2.2. Purpose and Scope	4
2.3. Applicable Regulatory Concerns	5
3. Program Requirements	6
3.1. Trial Designs	6
3.1.1. Group Sequential and Inverse Normal Designs	6
3.1.2. Adaptive Designs Based on Fisher’s Combination Testing Principle	8
3.1.3. Conditional Dunnett Test Designs	8
3.2. Simulation Tools	9
3.3. Analysis Tools	9
3.3.1. Test Decision	9
3.3.2. Estimating Treatment Effects	10
3.3.3. Conditional Power Calculations	10
3.4. Usability	10
3.5. Performance	11
4. Data Requirements	12
4.1. Input	12
4.2. Output	13
5. Life Cycle Requirements	14
5.1. System Maintenance	14
5.1.1. CRAN as Daily Quality Control Service	14
5.1.2. Bug Report Form	14

5.1.3. Version Control	15
5.2. Training of Users	15
II. Functional Specification (FS)	16
6. Introduction	4
6.1. Purpose and Scope	4
6.2. Dependencies	5
7. Functionalities	6
7.1. Business Objects	6
7.2. Functions	9
7.2.1. Group Sequential Designs	9
7.2.1.1. The Prototype Case	9
7.2.1.2. Boundary Shape Designs	10
7.2.1.3. Symmetric Designs	11
7.2.1.4. alpha-Spending Function Designs	12
7.2.1.5. beta-Spending Function Designs	13
7.2.1.6. Maximum and Expected Sample Size	14
7.2.2. Inverse Normal Design	16
7.2.3. Fisher's Combination Test	17
7.2.3.1. Type I Error Rate for Fisher's Combination Test	17
7.2.3.2. Designs	22
7.2.4. Sample Size Calculation	25
7.2.4.1. Normal Response	25
7.2.4.2. Binary Response	29
7.2.4.3. Survival Data	33
7.2.5. Power Calculation at Given Sample Size	42
7.2.5.1. Normal Response	42
7.2.5.2. Binary Response	44
7.2.5.3. Survival Data	45
7.2.6. Analysis Tools	47
7.2.6.1. Test Statistics	47
7.2.6.2. Confidence Intervals and p -Values	51
7.2.6.3. Conditional Power and CRP	57
7.2.7. Multi-Arm Designs	61
7.2.7.1. Adaptive Closed Test Procedure	61
7.2.7.2. Intersection Tests	64
7.2.7.3. The Conditional Dunnett Test	66

7.2.7.4.	Conditional Power and CRP	67
7.2.7.5.	Repeated Confidence Intervals and p -Values	68
7.2.7.6.	Binary and Survival Response	70
7.2.8.	Enrichment Designs	72
7.2.8.1.	Adaptive Closed Test Procedure	72
7.2.8.2.	Intersection Tests	73
7.2.8.3.	Conditional Power and CRP	75
7.2.8.4.	Repeated Confidence Intervals	76
7.2.8.5.	Stratified Analysis	77
7.2.8.6.	Binary and Survival Response	78
7.2.9.	Simulation Functions	81
7.2.9.1.	Simulating One Hypothesis Designs	81
7.2.9.2.	Simulating Multi-Arm Designs	84
7.2.9.3.	Dose Response Relationships in Multi-Arm Designs	88
7.2.9.4.	Selecting Treatment Arms in Multi-Arm Designs	89
7.2.9.5.	Simulating Enrichment Designs	90
7.2.9.6.	Effect Specification in Enrichment Designs	93
7.2.9.7.	Selecting Populations in Enrichment Designs	94
7.2.9.8.	Reproducibility of Simulation Results	95
7.3.	Data Input	96
7.4.	Output Specification	105
7.4.1.	Output Formats	105
7.4.2.	Trial Design	107
7.4.2.1.	getDesignGroupSequential	107
7.4.2.2.	getDesignInverseNormal	108
7.4.2.3.	getDesignFisher	109
7.4.2.4.	getDesignConditionalDunnett	110
7.4.2.5.	getDesignCharacteristics	111
7.4.3.	Sample Size and Power Calculation	112
7.4.3.1.	getSampleSizeMeans and getPowerMeans	112
7.4.3.2.	getSampleSizeRates and getPowerRates	113
7.4.3.3.	getSampleSizeSurvival and getPowerSurvival	116
7.4.4.	Accrual and Survival Time	119
7.4.4.1.	getAccrualTime	119
7.4.4.2.	getPiecewiseSurvivalTime	119
7.4.5.	Trial Design Simulation	121
7.4.5.1.	getSimulationMeans	121
7.4.5.2.	getSimulationMultiArmMeans	122
7.4.5.3.	getSimulationEnrichmentMeans	124

7.4.5.4.	getSimulationRates	125
7.4.5.5.	getSimulationMultiArmRates	127
7.4.5.6.	getSimulationEnrichmentRates	128
7.4.5.7.	getSimulationSurvival	130
7.4.5.8.	getSimulationMultiArmSurvival	132
7.4.5.9.	getSimulationEnrichmentSurvival	133
7.4.6.	Analysis Dataset	136
7.4.6.1.	getDataset – Means	136
7.4.6.2.	getDataset – Rates	136
7.4.6.3.	getDataset – Survival Data	137
7.4.6.4.	getDataset – Enrichment Survival Data	137
7.4.7.	Analysis Results	140
7.4.7.1.	getAnalysisResults – Group Sequential Design	140
7.4.7.2.	getAnalysisResults – Inverse Normal Design	141
7.4.7.3.	getAnalysisResults – Fisher Design	142
7.4.7.4.	getAnalysisResults – Multi-Arm Inverse Normal Design	143
7.4.7.5.	getAnalysisResults – Multi-Arm Fisher Design	144
7.4.7.6.	getAnalysisResults – Conditional Dunnett Design	145
7.4.7.7.	getAnalysisResults – Enrichment Inverse Normal Design	146
7.4.7.8.	getAnalysisResults – Enrichment Fisher Design	147
7.4.7.9.	getClosedCombinationTest	148
7.4.8.	Analysis Results – Stage Results	150
7.4.8.1.	getStageResults – Means	150
7.4.8.2.	getStageResults – Rates	151
7.4.8.3.	getStageResults – Survival Data	152
7.4.8.4.	getStageResults – Multi-Arm Means	153
7.4.8.5.	getStageResults – Multi-Arm Rates	154
7.4.8.6.	getStageResults – Multi-Arm Survival Data	154
7.4.8.7.	getStageResults – Enrichment Means	155
7.4.8.8.	getStageResults – Enrichment Rates	156
7.4.8.9.	getStageResults – Enrichment Survival Data	157
7.4.9.	Analysis Results – Conditional Power	159
7.4.9.1.	getConditionalPower – Means	159
7.4.9.2.	getConditionalPower – Rates	159
7.4.9.3.	getConditionalPower – Survival Data	160
7.4.9.4.	getConditionalPower – Multi-Arm Means	160
7.4.9.5.	getConditionalPower – Multi-Arm Rates	161
7.4.9.6.	getConditionalPower – Multi-Arm Survival Data	161

7.4.9.7.	getConditionalPower – Enrichment Means	163
7.4.9.8.	getConditionalPower – Enrichment Rates	163
7.4.9.9.	getConditionalPower – Enrichment Survival Data	164

IV. Verification 302

14. Overview 4

15. Test Plan (TP) 5

15.1. Testing Requirements and Strategy	5
15.1.1. Handling of Testing Failures	7
15.1.2. Time Report Types - User, Sys, Real	7
15.1.3. System Requirements	8
15.2. Installation Plan	9
15.3. Test Plan	11
15.3.1. Check Package Dependencies	11
15.3.2. Check rpact Functions	12
15.3.3. Run Unit Tests	13
15.3.3.1. Testing the Class 'Dataset'	13
15.3.3.2. Testing that 'getDataset' Throws Exceptions as Expected	85

15.3.3.3. Testing datasets for enrichment designs	86
15.3.3.4. Testing Class 'SummaryFactory'	123
15.3.3.5. Testing Class 'PiecewiseSurvivalTime'	140
15.3.3.6. Testing Class 'AccrualTime'	183
15.3.3.7. Testing the Analysis Means Functionality for One Treatment	212
15.3.3.8. Testing the Analysis Means Functionality for Two Treatments	236
15.3.3.9. Testing 'getStageResults'	268
15.3.3.10. Testing the Analysis Rates Functionality for One Treatment	280
15.3.3.11. Testing the Analysis Rates Functionality for Two Treatments	327
15.3.3.12. Testing the Analysis Survival Functionality for the Group Sequential Design	359
15.3.3.13. Testing the Analysis Survival Functionality for the Inverse Normal Design	372
15.3.3.14. Testing the Analysis Survival Functionality for the Fisher Design	383
15.3.3.15. Testing Analysis Enrichment Means Function (one sub-population)	391
15.3.3.16. Testing Analysis Enrichment Means Function (two sub-populations)	417
15.3.3.17. Testing Analysis Enrichment Means Function (more sub-populations)	437
15.3.3.18. Testing Analysis Enrichment Means Function (more sub-populations)	451
15.3.3.19. Testing Analysis Enrichment Rates Function . . .	456
15.3.3.20. Testing Analysis Enrichment Survival Function .	479
15.3.3.21. Testing the Correct Input Validation of All Anal- ysis Functions	497
15.3.3.22. Testing the Analysis Means Functionality for Three or More Treatments	499
15.3.3.23. Testing the Analysis Rates Functionality for Three or More Treatments	519
15.3.3.24. Testing the Analysis Survival Functionality for Three or More Treatments	537
15.3.3.25. Testing Assertion Functions	564
15.3.3.26. Testing the Output Format Functions	579
15.3.3.27. Testing .reconstructSequenceCommand	584

15.3.3.28. Testing Result Object Print Output	585
15.3.3.29. Testing Core Utility Functions	586
15.3.3.30. Testing Utilities	629
15.3.3.31. Testing the Fisher Design Functionality	640
15.3.3.32. Testing the Group Sequential and Inverse Normal Design Functionality	649
15.3.3.33. Testing the Power Calculation of Testing Means for Different Designs and Arguments	678
15.3.3.34. Testing the Power Calculation of Testing Rates for Different Designs and Arguments	740
15.3.3.35. Testing the Power Calculation of Survival Designs for Different Designs and Arguments	772
15.3.3.36. Testing the Power Calculation of Survival Designs for Other Parameter Variants	842
15.3.3.37. Testing the Sample Size Calculation of Testing Means for Different Designs and Arguments	890
15.3.3.38. Testing the Sample Size Calculation of Testing Rates for Different Designs and Arguments	952
15.3.3.39. Testing the Sample Size Calculation of Survival Designs for Different Designs and Arguments	984
15.3.3.40. Testing the Sample Size Calculation of Survival Designs for Other Parameter Variants	1297
15.3.3.41. Testing Other Functions of the Sample Size Calculator for Survival Designs	1355
15.3.3.42. Testing Design Utility Functions	1380
15.3.3.43. Testing Parameter Set Utility Functions	1396
15.3.3.44. Testing Simulation Means Function	1398
15.3.3.45. Testing Simulation Means Function in a Systematic Way	1457
15.3.3.46. Testing Simulation Rates Function	1620
15.3.3.47. Testing Simulation Survival Function	1672
15.3.3.48. Testing the Simulation of Survival Data for Different Parameter Variants	1836
15.3.3.49. Testing Simulation Enrichment Means Function	1982
15.3.3.50. Testing Simulation Enrichment Rates Function	2030
15.3.3.51. Testing Simulation Enrichment Survival Function	2095
15.3.3.52. Testing Simulation Multi-Arm Means Function	2144
15.3.3.53. Testing Simulation Multi-Arm Rates Function	2341
15.3.3.54. Testing Simulation Multi-Arm Survival Function	2526
15.3.3.55. Testing Class 'SummaryFactory'	2713

16. Test Protocol (TL)	2716
16.1. Installation Qualifications (IQ)	2716
16.1.1. Windows Operating Systems	2716
16.1.1.1. Log file 00check.log	2716
16.1.1.2. Log file 00install.out	2719
16.1.2. Linux Operating Systems	2720
16.1.2.1. Log file 00check.log	2720
16.1.2.2. Log file 00install.out	2722
16.2. Operational Qualifications (OQ)	2723
16.2.1. Dependency Check Protocol	2723
16.2.2. Operational Qualification of Group Sequential Designs	2727
16.2.2.1. Wang & Tsiatis Delta Class	2730
16.2.2.2. Pampallona & Tsiatis Class	3034
16.2.2.3. Alpha Spending Kim & DeMets	3104
16.2.2.4. Alpha Spending Hwang, Shih, & DeCani	3415
16.2.2.5. Beta Spending Non-Binding Kim & DeMets	3728
16.2.2.6. Beta Spending Binding Kim & DeMets	3780
16.2.2.7. Beta Spending Non-Binding Hwang, Shih, & DeCani	3839
16.2.2.8. Beta Spending Binding Hwang, Shih, & DeCani	3891
16.2.3. Operational Qualification of Fisher's Combination Test	3951
16.2.3.1. method = equalAlpha	3953
16.2.3.2. method = fullAlpha	4012
16.2.3.3. method = userDefinedAlpha	4067
16.2.3.4. method = noInteraction	4206
16.2.4. Operational Qualification of Sample Size vs Power Calculation	4233
16.2.4.1. Testing Means	4233
16.2.4.2. Testing Rates	4411
16.2.4.3. Testing Survival	4518
16.2.5. Operational Qualification of Final Confidence Intervals	4627
16.2.5.1. Test of Mean in One Sample	4630
16.2.5.2. Test of Means in Two Samples	4694
16.2.5.3. Test of Rate in One Sample	4758
16.2.5.4. Test of Rate in Two Samples	4781
16.2.5.5. Test in a Survival Design	4804
16.2.6. Operational Qualification of Overall Repeated p -Values	4804
16.2.6.1. Kim & DeMets Alpha-Spending Designs and Fisher Combination Test with equalAlpha	4806

16.2.6.2. Wang & Tsiatis Designs and Fisher Combination Test with fullAlpha	5031
16.2.6.3. Summary	5253
16.2.7. Operational Qualification of Repeated Confidence Intervals	5336
16.2.7.1. RCIs for One Mean	5338
16.2.7.2. RCIs for Two Means	5390
16.2.7.3. RCIs for One Rate	5442
16.2.7.4. RCIs for Two Rates	5494
16.2.7.5. RCIs for Survival	5546
16.2.7.6. Summary	5598
16.2.8. Operational Qualification of Dunnett Distribution and Quantiles	5640
16.2.8.1. Dunnett Quantiles for Known Variance	5642
16.2.8.2. Dunnett Probabilities for Known and Unknown Variance	5644
16.2.9. Unit Test Protocol	5668
16.3. Performance Qualifications (PQ)	5706
